Pods for extract makers

We supply raw vanilla inputs for your own process; finished liquid extract is not offered in this range.

Select the raw material

Discuss Grade B, Rouge EU / US, TK or cuts against your solvent, extraction equipment and target profile. Grade names and shorter lengths do not establish an extraction yield or a guaranteed vanillin level.

Validate your process

Compare samples by moisture, vanillin analysis basis, aroma, microbiology, usable mass and batch consistency. Validate extraction time, solvent ratio and yield in your own trial. Confirm the product category and destination rules for your finished extract with the responsible specialist.

Packing & quotation

Discuss 10 kg or 20 kg outer cartons with sealed food-contact inner packs. Individual 1 kg repacking adds EUR 5 per pack, including remainder kilos. Custom labels, pack configuration and destination requirements are confirmed in the quotation. Main freight, insurance, duties and taxes are separate unless expressly included.

Confirm the offered lot

Request product form, grade, length, quantity, intended use and delivery destination. The written quotation confirms legal seller, lot specification, availability, MOQ, sample cost, price basis, named delivery point, payment and dispatch timing. No standing delivery or certification promise is made by this guide.
